# Chapter 1

## DHT22 - AM2303 temperature and humidity sensor library for Arduino

This is a calibrated AM2303 digital temperature and relative humidity sensor on a [DHT22](#) breakout PCB.

### Library features

- Read 16-bit temperature (synchronous blocking)
- Read 16-bit relative humidity (synchronous blocking)

### AM2303 sensor specifications

- Voltage: 3.3 .. 5V
- Ultra-low power:
  - Typical 15uA dormancy
  - Typical 500uA measuring
- Single wire digital serial interface
- Calibrated digital signal
- Outstanding long term stability
- No additional electronic components needed
- Humidity:
  - Range: 0 .. 99.9 RH (Relative Humidity)
  - Resolution: 0.1 RH
  - Accuracy: +/- 2 RH (at 25 degree Celsius)
- Temperature:
  - Range: -40 .. +125 degree Celsius
  - Resolution: 0.1 degree Celsius
  - Accuracy: +/- 0.4 degree Celsius
- Minimum read interval: 2000 ms
- ~31ms to synchronous read humidity, temperature and parity data from sensor (5 Bytes)

## Hardware

### Pull-up resistor DAT pin

- Connect an external 3k3 . . 10k pull-up resistor between the DAT and VCC pins only when:
  - Using a AM2302 sensor without a DT22 breakout PCB **and** the MCU IO pin has no built-in or external pull-up resistor.
- The [DHT22](#) breakout PCB contains a 3k3 pull-up resistor between DAT and VCC.
- Please refer to the MCU datasheet or board schematic for more information about IO pin pull-up resistors.

### External capacitor

- Tip: Connect a 100nF capacitor between the sensor pins VCC and GND when read errors occurs. This may stabilize the power supply.

### Connection [DHT22](#) - Arduino

<a href="#">DHT22</a>	Arduino UNO / Nano / Pro Mini / Leonardo / Mega2560
GND	GND
VCC	5V (or 3.3V)
DAT	2 (DIGITAL pin)

### Connection [DHT22](#) - ESP8266

Some ESP8266 boards uses Arduino pin 2 -> GPIO4 which is D4 text on the board. Make sure you're using the right pin.

<a href="#">DHT22</a>	ESP8266 / WeMos D1 R2 / ESP12E / NodeMCU
GND	GND
VCC	3.3V
DAT	D4

### Connection [DHT22](#) - WeMos LOLIN32

WeMos LOLIN32 requires an additional 100nF capacitor over the GND - VCC pins to prevent parity errors.

Use pin 0 to prevent flash problems.

<a href="#">DHT22</a>	WeMos Lolin32
GND	GND
VCC	3.3V
DAT	0

Other MCU's may work, but are not tested.

## Examples

- Examples | Erriez DH22 | [Example](#)

## Usage

### Initialization

```
{c++}
#include <DHT22.h>

// Connect DHT22 DAT pin to Arduino board

// Arduino DIGITAL pin
#define DHT22_PIN      2
// Some ESP8266 boards uses D2 instead of 2
// #define DHT22_PIN    D2
// LOLIN32 uses another pin
// #define DHT22_PIN    0

DHT22 sensor = DHT22(DHT22_PIN);

void setup()
{
    // Initialize serial port
    Serial.begin(115200);
    Serial.println(F("DHT22 temperature and humidity sensor example\n"));

    // Initialize sensor
    sensor.begin();
}
```

### Read temperature and humidity

```
{c++}
void loop()
{
    // Check minimum interval of 2000 ms between sensor reads
    if (sensor.available()) {
        // Read temperature from sensor
        int16_t temperature = sensor.readTemperature();

        // Read humidity from sensor
        int16_t humidity = sensor.readHumidity();

        if (temperature == ~0) {
            // Print error (Check hardware connection)
            Serial.print(F("Temperature: Error"));
        } else {
            // Print temperature
            Serial.print(F("Temperature: "));
            Serial.print(temperature / 10);
            Serial.print(F("."));
            Serial.print(temperature % 10);
            Serial.println(F(" *C"));
        }

        if (humidity == ~0) {
            // Print error (Check hardware connection)
            Serial.print(F("Humidity: Error"));
        } else {
            // Print humidity
            Serial.print(F("Humidity: "));
            Serial.print(humidity / 10);
            Serial.print(F("."));
            Serial.print(humidity % 10);
            Serial.println(F(" %"));
        }

        Serial.println();
    }
}
```

### Serial output

DHT22 temperature and humidity sensor example

```
Temperature: 17.7 *C  
Humidity: 41.0 %
```

```
Temperature: 17.8 *C  
Humidity: 41.1 %
```

# File Index

### 3.1 File List

Here is a list of all documented files with brief descriptions:

<a href="#">DHT22.cpp</a>	
<a href="#">DHT22</a> (AM2303) Humidity and Temperature sensor example for Arduino	13
<a href="#">DHT22.h</a>	
<a href="#">DHT22</a> (AM2303) Humidity and Temperature sensor example for Arduino	13

## Chapter 4

# Class Documentation

### 4.1 DHT22 Class Reference

DHT22 sensor class.

```
#include <DHT22.h>
```

#### Public Member Functions

- [DHT22](#) (uint8\_t pin)  
*Constructor [DHT22](#) sensor.*
- void [begin](#) ()  
*Initialize sensor.*
- bool [available](#) ()  
*Check if new temperature or humidity read is allowed.*
- int16\_t [readTemperature](#) ()  
*Read temperature from sensor.*
- int16\_t [readHumidity](#) ()  
*Read humidity from sensor.*

#### 4.1.1 Detailed Description

DHT22 sensor class.

Definition at line 59 of file DHT22.h.

#### 4.1.2 Constructor & Destructor Documentation

##### 4.1.2.1 DHT22()

```
DHT22::DHT22 (
    uint8_t pin ) [explicit]
```

Constructor [DHT22](#) sensor.

#### Parameters

<i>pin</i>	Data pin sensor.
------------	------------------

Definition at line 38 of file DHT22.cpp.

### 4.1.3 Member Function Documentation

#### 4.1.3.1 available()

```
bool DHT22::available ( )
```

Check if new temperature or humidity read is allowed.

The application should call this function and check if a new temperature and humidity can be read to prevent too fast sensor reads.

#### Return values

<i>true</i>	Available, interval between sensor reads $\geq$ 2000 ms.
<i>false</i>	Not available, interval between sensor reads too short.

Definition at line 87 of file DHT22.cpp.

#### 4.1.3.2 begin()

```
void DHT22::begin ( )
```

Initialize sensor.

Call this function from setup().

- Connect an external 3k3..10k pull-up resistor between the DAT and VCC pins only when:
  - using a AM2302 sensor without a DT22 breakout PCB  
AND
  - the MCU IO pin has no built-in or external pull-up resistor.
- The [DHT22](#) breakout PCB contains a 3k3 pull-up resistor between DAT and VCC.
- Please refer to the MCU datasheet or board schematic for more information about IO pin pull-up resistors.

Definition at line 68 of file DHT22.cpp.

#### 4.1.3.3 readHumidity()

```
int16_t DHT22::readHumidity ( )
```

Read humidity from sensor.

##### Return values

<i>Humidity</i>	Signed humidity with last digit after the point.
<i>~0</i>	An error occurred.

Definition at line 130 of file DHT22.cpp.

#### 4.1.3.4 readTemperature()

```
int16_t DHT22::readTemperature ( )
```

Read temperature from sensor.

Returns the actual temperature, or a cached temperature when read interval is too short.

##### Return values

<i>Temperature</i>	Signed temperature with last digit after the point.
<i>~0</i>	An error occurred.

Definition at line 107 of file DHT22.cpp.

The documentation for this class was generated from the following files:

- [DHT22.h](#)
- [DHT22.cpp](#)

## Chapter 5

# File Documentation

### 5.1 DHT22.cpp File Reference

**DHT22** (AM2303) Humidity and Temperature sensor example for Arduino.

```
#include "DHT22.h"
```

#### 5.1.1 Detailed Description

**DHT22** (AM2303) Humidity and Temperature sensor example for Arduino.

### 5.2 DHT22.h File Reference

**DHT22** (AM2303) Humidity and Temperature sensor example for Arduino.

```
#include <Arduino.h>
```

#### Classes

- class **DHT22**  
*DHT22 sensor class.*

#### Macros

- #define **DHT22\_MIN\_READ\_INTERVAL** 2000  
*Enable debug prints to Serial.*
- #define **DHT22\_NUM\_DATA\_BITS** (5 \* 8)
- #define **DEBUG\_PRINTLN**(...) {}  
*Debug print configuration.*

### 5.2.1 Detailed Description

[DHT22](#) (AM2303) Humidity and Temperature sensor example for Arduino.

Source: <https://github.com/Erriez/ErriezDHT22>

### 5.2.2 Macro Definition Documentation

#### 5.2.2.1 DHT22\_MIN\_READ\_INTERVAL

```
#define DHT22_MIN_READ_INTERVAL 2000
```

Enable debug prints to Serial.

Minimum interval between sensor reads in milli seconds

Definition at line 41 of file DHT22.h.

#### 5.2.2.2 DHT22\_NUM\_DATA\_BITS

```
#define DHT22_NUM_DATA_BITS (5 * 8)
```

Number of data bits is 5 Bytes \* 8 bits: 1 Byte: Humidity high 1 Byte: Humidity low 1 Byte: Temperature high 1 Byte: Temperature low 1 Byte: Parity

Definition at line 49 of file DHT22.h.
